

Combat Log — The Temple of Shar

8 September 2026 · 3 combats · folded from 177 Battle Flow stamped messages of 619

Three fights, all underground, all in the same building: a one-round break-off where the high priest declined to fight and teleported away, a four-round grind against seven Sharrans on the temple floor, and a three-round boss with legendary actions. The party dealt **746** and took **201**. One PC went down and was raised; one hit zero and stood straight back up. Nobody rolled a death save all night.

Two sorcery points prevented 188 damage. Gren's two Fireballs both caught the entire party in the radius. Rolled out of the actual saves, they would have taken 66 from the first and 122 from the second — 188 total, against the 201 the party actually lost across the whole session. *Careful Spell* is the reason the floor fight was a win rather than a rout, and it is the second session running that it has topped this table.

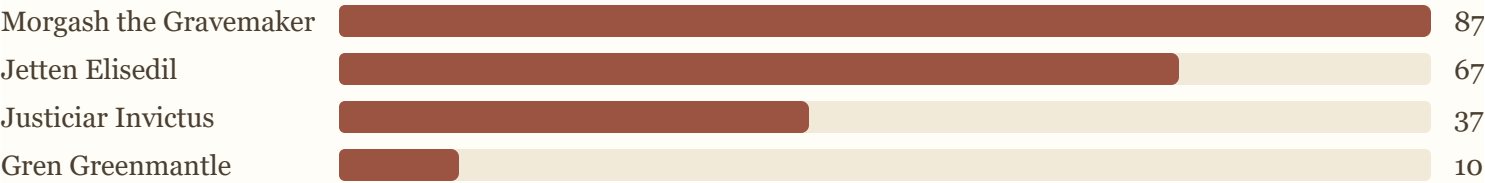

1 · Headline numbers

Damage dealt, by character

Gren dealt 36% of the party's damage. 257 of his 267 was fire, out of three spells — two Fireballs and a Fire Bolt.

Damage taken, by character

The two front-liners absorbed 77% of everything that landed. Gren took one hit all session — a longsword, through the trip attack that put him prone.

CHARACTER	DEALT	TAKEN	HEALED OTHERS	NAT 20S	NAT 1S
Gren Greenmantle	267	10	0	0	0
Morgash the Gravemaker	161	87	11	3	0
Jetten Elisedil	161	67	10	1	2

CHARACTER	DEALT	TAKEN	HEALED OTHERS	NAT 20S	NAT 1S
Justiciar Invictus	157	37	66	1	0
OPPOSITION	DEALT	ACCURACY	TAKEN		
Harrow Vane	88	3/4 · 75%	193		
Sharran Zealot ×3	44	6/12 · 50%	236		
Sharran Enforcer ×2	45	5/9 · 56%	162		
Sharran Acolyte ×2	24	—	125		

2 · The break — 02 Temple of Shar, 1 round

Invictus opened on Harrow alone: a *Shield Master* bash put the high priest prone (failed at 11 vs DC 15), then two clean hits with Midnight. Harrow's answer was to refuse the engagement entirely — *Word of Recall*, and gone. He gave up 30 hit points to learn what the party could do and to pick his own ground. Correct play.

COMBATANT	DEALT	PER ROUND	ACCURACY	TAKEN
Justiciar Invictus	30	30.0	2/2 · 100%	0
Harrow Vane	0	0.0	—	30

3 · The temple floor — 03 Temple of Shar, 4 rounds

Three Zealots, two Enforcers, two Acolytes. **523 dealt, 113 taken.** The round that decided it was the first: an Acolyte led with *Spirit Guardians*, and Jetten's opening longbow shot — longbow, *Hunter's Mark* and *Dreadful Strike* stacked for 26 — forced a concentration check she blew with a 5 against DC 13. The aura came down on the round it went up. Morgash killed her outright on the next turn with a 32 to hit and an 18-damage maul swing, and *Great Weapon Master* — *Hew* gave him the follow-up for free.

COMBATANT	DEALT	PER ROUND	ACCURACY	TAKEN
Gren Greenmantle	258	64.5	— (11 hits, spells)	10
Morgash the Gravemaker	92	23.0	8/10 · 80%	12
Jetten Elisedil	89	22.3	6/8 · 75%	58
Justiciar Invictus	84	21.0	5/6 · 83%	33
Sharran Enforcer ×2	45	11.3	5/9 · 56%	162

COMBATANT	DEALT	PER ROUND	ACCURACY	TAKEN
Sharran Zealot ×3	44	11.0	6/12 · 50%	236
Sharran Acolyte ×2	24	6.0	—	125

Jetten took 58 of the party's 113 here, and that was tactics rather than luck. The Enforcers used *Trip Attack* on him three times, he failed all three Strength saves (13, 11, and one more against DC 15), and every follow-up came at advantage against a prone target. He is the least-armoured member of the front line and the enemy found that within a round. He went to 0 to a Zealot's halberd and *Lay on Hands* put him straight back up.

Morgash failed every save he rolled in this fight — 0 for 4. Spirit Guardians, a Fireball, and the *Hold Person* that cost him a full turn paralysed. Nothing about the encounter was overtuned; his save profile is simply the party's softest and two different Sharrans exploited it correctly.

4 • Harrow Vane — 03 Temple of Shar, 3 rounds

193 dealt to him, 88 from him. He used the boss kit properly: two legendary actions every round, every one of them *Necrotic Burst*, and **every one aimed at Morgash** — 13, 13, 7 and one miss. That is why Morgash absorbed 75 of the 88 while the other three took 13 between them. Add *Unholy Word* (stunned Jetten at 8 vs DC 16 and broke Invictus's concentration on *Bane*), one Legendary Resistance spent to refuse a shield-bash knockdown, and a *Flame Strike* at DC 18 that put Morgash at 0.

COMBATANT	DEALT	PER ROUND	ACCURACY	TAKEN
Harrow Vane	88	29.3	3/4 · 75%	193
Jetten Elisedil	72	24.0	6/7 · 86%	9
Morgash the Gravemaker	69	23.0	6/7 · 86%	75
Justiciar Invictus	43	14.3	2/2 · 100%	4
Gren Greenmantle	9	3.0	1/1 · 100%	0

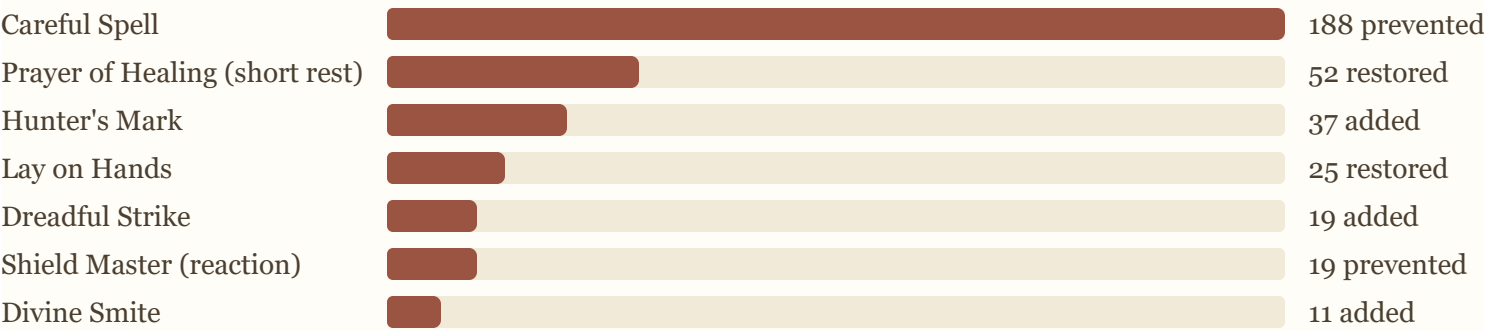

The boss did not lose to bad dice — he lost to 86% accuracy from both front-liners. Morgash and Jetten each hit 6 of 7 against AC 17, and Invictus hit both of his. Harrow's own 3-of-4 was fine. He simply could not out-pace four characters hitting almost everything while he spent his legendary economy on a single target who kept standing back up.

5 · What the buffs and features actually bought

Every spell, maneuver and mastery that touched a number this session, and what it produced. Ranked by how much it moved the fight.

The big three

Damage prevented, restored or added, by effect

Careful Spell is not close to anything else. Nothing on this list except Prayer of Healing is even a third of it.

- **Careful Spell — the best two sorcery points of the campaign so far.** Fireball #1 would have hit Morgash for 27 (failed) and Gren, Jetten and Invictus for 13 each (saved): 66. Fireball #2 would have hit Jetten, Invictus and Morgash for 35 each (all failed) and Gren for 17 (saved): 122. **188 damage prevented**, while both blasts landed at full value on seven Sharrans for roughly 246.
- **Bless finally earned its concentration — eight flips.** Last session it flipped exactly one outcome all night. This session: three misses turned into hits (Jetten vs an Acolyte at AC 16, Invictus vs a Zealot at AC 17, Jetten and Morgash both vs Harrow at AC 17), two concentration saves held that would have dropped (Gren's Bless, Jetten's Hunter's Mark), one Fireball save flipped for Gren — and, decisively, **Invictus's Flame Strike save at DC 18, made on an 18 only because of a +2 die.**
- **Shield Master, stacked on top of that same save.** Its reaction turns a successful Dex save against an area effect into no damage at all, so Bless plus Shield Master took Invictus from roughly 19 damage to zero on one Flame Strike. The bash also put Harrow prone in round one of the break and forced a Legendary Resistance later.

Maneuvers and masteries

EFFECT	USES	WHAT IT PRODUCED
Sap (Midnight)	9	Disadvantage on the target's next attack, nine times — most of it on Harrow
Topple (Maul of Momentum)	7	2 prone, 5 resisted — 29%. Down from 86% last session
Shield Master — bash	5	2 knockdowns, 1 Legendary Resistance burned, 2 saved against
Vex (shortsword)	3	Advantage carried into Jetten's follow-up each time

EFFECT	USES	WHAT IT PRODUCED
Precision Attack	2	1 converted (15 + 2 = 17 vs AC 17, into 13 damage on Harrow); 1 spent and still missed
Riposte	2	1 hit for 13 on Harrow, 1 miss. An Enforcer riposted Morgash back and missed too
Great Weapon Master — Hew	2	Two free attacks, both off crits
Action Surge	1	Two extra maul swings into Harrow
Relentless Endurance	1	Flame Strike put Morgash at 0; he stood at 1. No death saves were rolled all session because of it
Adrenaline Rush	1	3 temporary hit points and a bonus-action dash to close on Harrow
Death Armor	1	7 necrotic returned to a Zealot who hit Invictus

Bufs, and what they were worth

BUFF	COST	RETURN
Careful Spell	2 sorcery points	188 damage prevented — best value of the night by a factor of three
Bless	2nd-level slot, recast once	8 flips , including the Flame Strike save that kept Invictus off the floor
Prayer of Healing	2nd-level slot, 10 minutes	A full short rest mid-dungeon: 52 HP across 8 hit dice, plus Morgash's superiority dice and Gren's sorcery points back. The reason they met Harrow at strength
Hunter's Mark	1st-level slot ×2	37 force damage. Broken twice — once by Gren's own Fireball, once by hitting o
Aid	2nd-level slot	+5 max HP to three PCs, cast just before the boss. Morgash was deliberately left off it and he is the one who hit o
Innate Sorcery	1 of 2 uses	Changed no outcome. Spell save DC 15 → 16 and Gren forced no saves while it was up. It bought advantage on one Fire Bolt for 9 damage
Bane	1st-level slot	Landed on Harrow (11 vs DC 13) and was gone about a round later when <i>Unholy Word</i> broke concentration on a 5 vs DC 10. No flip is attributable to it
Death Armor	2nd-level slot	7 damage returned, once, in an hour-long duration. Thin, but it cost a turn that had nothing better to do

BUFF	COST	RETURN
Pearl of Power	1 use	A 3rd-level slot back, which became the second Fireball. Paid for itself several times over

Healing that mattered

Invictus carried the party's staying power. *Lay on Hands* emptied its whole 25-point pool — 15 into Morgash, then **10 to raise Jetten off the floor** — and he added 31 more out of combat, an *Aid*, and the *Prayer of Healing* that bought the free short rest. That rest returned 52 hit points across 8 hit dice (Jetten 3, Invictus 3, Morgash 1, Gren 1). Jetten drank a potion for 6 and healing-worded himself for 10; Morgash used Second Wind for 10 after the fight. The Sharrans healed too — a Zealot spent a bonus action on his own *Lay on Hands* for 25, which bought him roughly one extra round.

6 • Combat flow — decision speed

The timing stamps, averaged per player across timed decision moments.

CHARACTER	AVG DECISION	TIMED MOMENTS	SLOWEST CALL
Jetten Elisedil	4.6s	12	24.0s — concentration
Morgash the Gravemaker	12.5s	18	24.7s — mastery
Justiciar Invictus	14.1s	7	24.0s — bash offer
Gren Greenmantle	17.5s	6	24.0s — concentration

Jetten has nearly halved his average since session 6 (8.4s → 4.6s) while generating half again as many decisions. Morgash again produces the most timed moments of anyone at the table by a wide margin — 18, against 25 for the other three combined — and still lands mid-pack on speed; the martial kit is being used, and used deliberately. Invictus and Gren are the slow seats, but on the lowest volume, and both of their slowest calls are the same 24-second ceiling rather than genuine deliberation.

7 • Economy and flavour

Resources spent

- Gren** — Font of Magic 2/5, Innate Sorcery 1/2, Misty Step (Fey-Touched) 1/1, Wand of Magic Missiles 1/7, Pearl of Power used; 11 spell levels burned across two 3rd, two 2nd and three 1st-level casts.
- Morgash** — Combat Superiority 2/4 in each fight, Action Surge 1/1, Adrenaline Rush 1/3, Second Wind 1/3, **Relentless Endurance spent.**
- Invictus** — Lay on Hands 25/25 emptied, Midnight 1/1, four 1st-level and two 2nd-level slots, one Divine Smite, Channel Divinity unspent (*Vow of Enmity* was flagged at the table and never used).

- **Jetten** — four 1st-level slots, Dreadful Strike uses, one Potion of Healing.

The night's dice

- **Buff-die flips:** eight. Jetten ×3 (a hit on an Acolyte, a hit on Harrow, a held Hunter's Mark), Gren ×2 (a Fireball save, a held Bless), Invictus ×2 (a hit on a Zealot, and the Flame Strike save), Morgash ×1 (a hit on Harrow).
- **Natural 20s:** Morgash ×3, Jetten ×1, Invictus ×1 — and Sharran Zealots ×3.
- **Natural 1s:** Jetten ×2. Nobody else rolled one.
- **Advantage rolled:** Gren ×5, Jetten ×5, Morgash ×2, Invictus ×2 — against Enforcers ×2, Harrow ×2, Zealot ×1 on the other side, most of it off prone targets.
- **Death saves:** none. Jetten was raised from 0 by Lay on Hands before his turn came round; Morgash never reached 0 for longer than it took Relentless Endurance to fire.
