

The Temple of Shar

8 September 2026 · bookkeeping, automation that cost time, rulings, table observations

The system, the sheets and the table. Plot is in the story notes; the combat numbers are in the combat log.

Act on this first: Careful Spell + Fireball in Battle Flow. Both casts auto-rolled saves for the *excluded* allies and auto-applied the damage; nine applications were reverted by hand across two rounds, and one of those reverts is what un-killed Gren. It was the single biggest time sink of the night and Gren will cast it again on Monday.

1 · Bookkeeping to apply before Monday

- ☐ Level 6, all four PCs.
- ☒ **Actor renamed** Thomas A. Invictus → Justiciar Invictus (dCMYjnrBUrdCqXwo). This session's snapshot is Justiciar Invictus.json ; every earlier one is Thomas A. Invictus.json . Same actor.
- ☒ **Duskheart** on Jetten, attuned at the table.
- ☒ **Vesper Staff** on Gren. Attunement line changed tonight to **Cleric, Sorcerer, or Wizard** on his copy and the world item (it read "Cleric or Wizard" and excluded him).
- ☐ **Robe of Protection** — Morgash said he'd drop the **Periapt of Wound Closure** to attune. Verify: he was at Maul of Momentum + Graveheart + Periapt.
- ☐ **Sera's Longbow** — Selma handed it back; Morgash claimed it. Confirm it left her inventory and is on his sheet.
- ☐ **Renlow Veck's Signet Ring** (Morgash, Xo6UU8qy00VQURwR) — created pre-session as a bare ring. At the table Morgash took **the whole finger**. Rename/redescribe, or leave as flavour. One-line edit.
- ☒ **Temple loot** — seven items, ~1,500 gp, in the party stash.
- ☐ **Party coin** — ~1,500 gp in from the hag hoard, 300 gp out for six Potions of Healing. Reconcile the stash.
- ☐ **Potions** — Jetten 2, Invictus 1, Morgash 1, Gren kept 2.
- ☐ **Heroic Inspiration for Morgash.** Said mid-fight that he should have had one for the grapple argument; award it at the top of session 8.

2 • Automation that cost time — ranked by minutes lost

1. **Careful Spell + Fireball.** Both Fireballs auto-rolled Dex saves for the excluded allies and auto-applied damage: four reverts the first time, five the second — and **the second revert is what un-killed Gren**, who went to 0 from his own spell through a timer-rolled save. Careful Spell needs to actually exclude the chosen creatures from the save prompt, or the prompt needs to stop auto-rolling.
2. **The 24-second decision timer auto-resolves saves.** It fired on two Fireball saves, a Spirit Guardians save and a shield-bash offer. Auto-rolling a *save* on timeout is the dangerous case — it is how Gren dropped. Longer timer, or timeout = re-prompt rather than roll.
3. **Spirit Guardians rolled a save for Gren out of range.** Flagged as a bug and reverted. The emanation is catching tokens outside the aura, or the wall isn't blocking.
4. **Stale Shield effect after a revert.** The rewind left a *Shield* effect on Gren, so the reaction wasn't offered on the next hit and that damage was reverted by hand too. Reverts should clear effects they applied.
5. **Private rolls toggled on by accident** at the start of the floor fight. Cosmetic; confused two turns.

3 • Rulings made — keep consistent

- **Divine Smite is melee-weapon only.** No javelin smites.
- **Find Steed is largely flavour indoors.** The steed doesn't come into the dungeon.
- **Dreadful Strike:** once per turn, uses = Wisdom modifier.
- **Prayer of Healing:** ten-minute cast, grants short-rest benefits. Used mid-dungeon; it changed the boss fight (52 HP across 8 hit dice plus superiority dice and sorcery points back). Expect it every session now.
- **Sorcerous Restoration** costs five sorcery points for a 3rd-level slot. Gren used the Pearl of Power instead — which became Fireball #2.
- **Non-proficiency with a tool kit** = no proficiency bonus, not inability to use it.
- **Bog Staff is not magical.** 1d8 plus stale bullywug poison, no +2.
- **Careful Spell RAW** is what was ruled: excluded allies take nothing. The automation is what's wrong, not the ruling.
- **Vow of Enmity** was pointed out to Invictus and never used. It's free advantage for a minute — remind him.

4 • Player and table observations

- **Robert isn't using his hotbar.** Every Lay on Hands and every Midnight attack was a sheet dig. It will cost more at level 6 with more options.

- **Anthony (Morgash)** generated 18 timed decisions — the most at the table — at a mid-pack 12.5s average, and carried two roleplay scenes. The martial kit is fully in use.
- **Drew (Jetten)** is the fastest seat by a distance: 4.6s average, halved since session 6.
- **Tom (Gren)** is exporting his sheet to Claude for level-up help; it mixes 2014 and 2024 rules. It will come up again at level 6 for everyone.
- **Craig flagged an encode warning on the DM track.** Audio came through fine.
- **Pacing:** 3h26m, combat began at 1h51m, nobody minded. The talk *was* the session.

5 • Combat observations — pointer

Full report in the combat log. Two things to carry forward:

- **Careful Spell prevented 188 damage for two sorcery points** — nearly the party's whole damage-taken total (201). Best spend two sessions running; see §2 for why it's also the biggest time cost.
- **Topple went 2 for 7** against DC 15 Con saves (86% last session). Sharran statblocks have good Con; the Maul is not the auto-prone it was against bullywugs.

GM-only. Compiled from the transcript, the chat log and the live sheets by the session scribe.
